

Ruedi Bechtler Flip Flop

£29

Play, coincidence, wonder, vital force, decay, and waste are all essential topics of Ruedi Bechtler's work.

Graduating as a mechanical engineer, Bechtler (born 1942, in Zürich) developed his affinity with natural science and technology as an artistic practice.

And the artist, as an intermediary between science and philosophy, might have found, if not more answers, at least better questions than many scientists.
