

New title information

Sam Lewitt More Heat Than Light

£36.00

The work consists of oversized custom flexible heating circuits, used for environmental regulation in the sealed environments of equipment as diverse as medical equipment and food trays, in satellites and chemical vats.

The heating circuits in *More Heat Than Light* are several times their conventional size, scaled-up and designed to draw their power and maximize the energy resources of the electrical circuits allotted for lighting within the sites they are inserted into. Energy allotted for stable artificial light is converted in this work into diffuse uneven warmth.

The book is conceived as a stand-alone object utilizing these images as well as research material relating to the work. On one hand, it picks-up the structure of a log of core temperatures of the sort compiled for analysis by the logistics and distribution industry.

On the other hand, its format and layout utilize a two-color gradient printing process that interrupts the logical, spatial organization of the gridded screen-shots.

Published alongside the exhibition at Kunsthalle Basel, 1 April – 29 May 2016.

Product Details

Artist(s)	Sam Lewitt
Author(s)	Elena Filipovic, Melanie Gilligan, Anthony Huberman, Sam Lewitt, Mark von Schlegell
Publisher	Walther Koenig
ISBN	9783960980162
Format	softback
Pages	228
Illustrations	100 colour
Dimensions	260mm x 190mm
Weight	735

Publication Date: Feb 2017
